

We are looking for DevOps Engineer

— f/m - Berlin

At IPDB (Interplanetary Database Foundation) we are on a mission to put people, organizations, and machines in control of their data and digital assets by building a blockchain meta database for a decentralized public infrastructure.

We expect stacked technologies in the future. Therefore we at IPDB research and create software stacks which are highly modular. Technologies that we currently research and integrate into the IPDB test network include BigchainDB, MongoDB, Tendermint (COSMOS), Stellar, and Bitcoin among others.

We maintain a calculated balance between pragmatism, deeply informed protocol design, and strict application of robust engineering principles. Crucially, we believe in a collaborative approach to creation: at IPDB we share a distinct appreciation for the transformative power of open source. IPDB is based in the heart of Berlin, also some team members and contributors are remote.

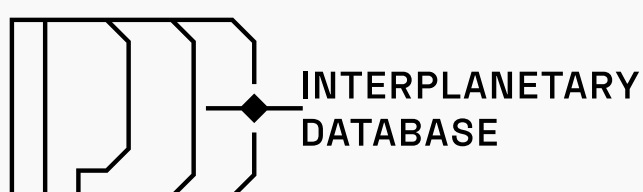

AT IPDB YOU HAVE THE OPPORTUNITY TO:

- » research and build the next generation of decentralized technology;
- » monitor systems architecture;
- » integrate research results into real code and test it;
- » work with a cross-functional and interdisciplinary team including colleagues from various organizations of IPDB members;
- » engage and educate the community, from users to contributors.

YOU MAY BE FIT FOR THIS ROLE IF YOU HAVE:

- » proficiency in python and go are a definite plus;
- » familiarity with web applications, knowledge of at least one or better two different web stacks, not being afraid of getting into yet another one;
- » knowledge of cryptography: symmetric vs. asymmetric, zero-knowledge proofs a plus, and other primitives would be great;
- » familiarity with consensus layers: Tendermint is a plus;
- » solid knowledge of working with git and github.

WHAT IT'S LIKE TO WORK AT IPDB?

IPDB's vision is to empower every individual, organization, smart agent, and entity to control of their data and digital assets. We research and build an open source protocol stack to enable control of data and digital assets.

IPDB is based in Berlin. Ideally you live here or are open to move to this fascinating gravity point of decentralized technologies. We are looking for candidates with unique perspectives and diverse backgrounds.
